Tiger Rip™ Fence Universal Adaptor Kit

Patent Pending

Description

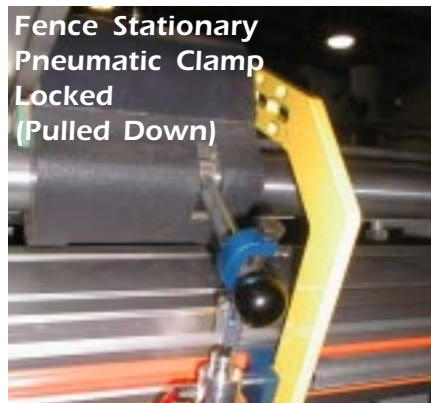

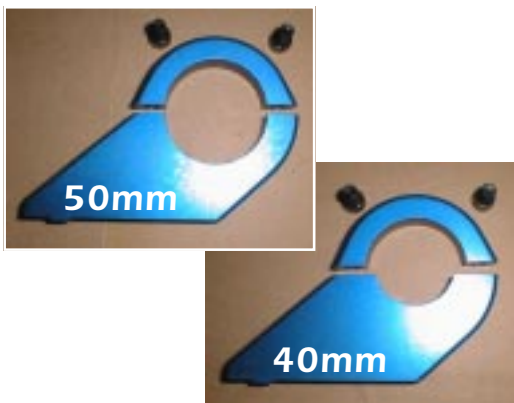

The TigerRip™ Fence Universal Adaptor Kit is a simple straightforward system that allows installation on almost all table and panel saws which utilize a 50mm round shaft for the rip fence guide. (Alternate brackets are available for saws with 40mm shafts.) Working range is 53", and the OA net length is 77¾" head to tail.

Installation

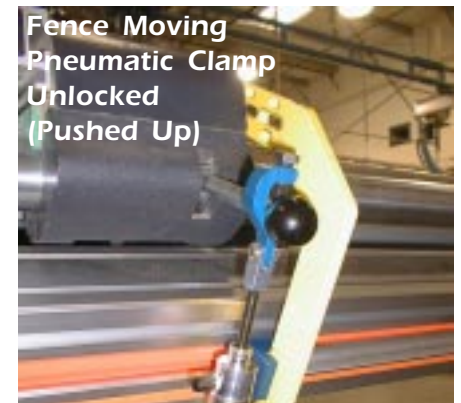

The patent pending system for mounting allows the user to install the TigerRip™ Fence quickly and accurately to the saw. The interconnecting bracket between the stop system and the actual main body casting of the saw rip fence can be universally adjusted to allow use on almost any fence.

The customer typically has to drill and tap only one hole into the body of the fence casting. Normal installation can be achieved in less than half a day.

Though most saws can be easily retrofitted with TigerRip™ Fence, customers should be aware that their particular saw may require additional modifications or accommodations to meet their specific requirements. This work will need to be done either by the purchaser or the dealer. TigerStop™ does not take responsibility for nor guarantee that TigerRip™ Fence will fit all models without modification. Always consult the factory before ordering to obtain additional information.
